Discs of male & female
organs of generation.

On the Diseases of the genital organs,
in men

They are subject-

1 To Impotence. This is sometimes
1 congenital from mal conformation of some
of the organs. In which case it is mostly
incurable.

2 It is acquired by ~~the loss of~~ the
intemperate use of venery in early life,
& 3 by the Vice of Onanism. This is the
^{common} most cause of this disease.

4 By a hypochondriac belief in inability
in the organs of generation when neither
debility, nor disease exists in them.
